EDUCATION

Emory University **Atlanta, GA**
Quantitative Science-Data Science(Major) | Artificial Intelligence(Minor) Expected December 2026

- **Cumulative GPA**: 3.82/4.0
- **Relevant Courses:** Quantitative Models, Probability, Linear Algebra, Regression Analysis
- **Technical Skills:** Python, R, SQL, Matplotlib, Excel, Google Sheet, Google Analytics

WORK EXPERIENCE

Atmosfy, Inc. **San Francisco, CA**
Data Analysis Intern (Remote) Sep. 2024 – Dec. 2024

- Identified, evaluated, and refined large datasets applicable to market and local news and contributed to the development of the weekly newsletter; drafted a 10-page memo weekly and highlighted new developments.
- Collaborated on developing a user churn prediction model, delivering actionable insights that reduced churn rates through targeted retention strategies.
- Analyzed user behavior data using SQL and Python to identify engagement trends, resulting in a measurable increase in active users.

Tencent **Shenzheng, CN**
Data Science Intern Jun. 2024 – Aug. 2024

- Built a sales forecasting model leveraging Tencent's Hunyuan AI framework (Python/SQL), to forecast sales.
- Optimized data extraction workflows, reducing processing time by ~15% and enhancing model efficiency.
- Designed a real-time sales performance dashboard using Matabase to support executive decision-making.

Project and Research Experience

AI-Powered Campus Advisory System **Atlanta, GA**
Team Lead Sep. 2023 – May. 2024

- Led a 4-member team to develop a ChatGPT-based course selection system, integrating academic counseling and campus resources (e.g., library bookings, mental health services)
- Processed institutional course enrollment data from university registrars, performed rigorous data cleaning (handling missing values, standardizing formats), and structured the refined dataset into JSON/CSV schemas to optimize training pipelines for ChatGPT-based academic advisory models.
- Presented outcomes to department leadership, securing API access to institutional databases for system deployment.

Sports Analytics, DataScraping and QB Performance Modeling **Atlanta, GA**
Researcher Sep. 2023 – Dec. 2023

- Scraped 5 years of structured data (ESPN, Pro Football Focus) on NCAA player performance, combine metrics, and social media sentiment; Employed a Random Forest ensemble model with 40+ features (e.g., pass efficiency, injury frequency) to predict draft outcomes.
- Conducted counterfactual analysis disproving "Parcells' Rules" revealing an 18% probability of elite QB exclusion under weight-based criteria.

Emory University Quantitative Science Department | Prof. Clifford J.Carrubba **Atlanta, GA**
Research Assistant Jan. 2025 – Present

- Studied dynamic strategy interaction models using Evolutionary Game Theory to investigate cooperation and defection behaviors among AI agents in resource-constrained environments;
- Participated in Scraping operational data (e.g., energy consumption, training cycles) from 50+ global AI models to construct a panel dataset, validating game-theoretic predictions via fixed-effects models
- Explored computational centralization-induced "Nash Equilibrium Trap": leading AI agents prioritized excessive competition, reducing system-wide sustainability by 12–18%

ADDITIONAL INFORMATION

Language: Mandarin Chinese(native), English(full proficiency), German(intermediate), Japanese(basic)
Volunteering: Michael C. Carlos Museum Volunteer, Hainan Youth Supportive Teacher
Interests: Tennis, Video-gaming, Hiking, Photography, Cuisine, Movies, Vlogging and Video Editing
